 Pythidae  
 Erotylidae  
 Cisidae  
 Sphindidae

Ralph Hopping's collection is strong in Cerambycidae, especially the Lepturini on which he and J. M. Swaine published, and the Clytini which were revised by George R. Hopping. Other families well represented include the Scolytidae, Tenebrionidae and Buprestidae.

The major part of the collection was formed before he went to British Columbia. More material, nearly all from California, Oregon and Washington was added as the result of vacation trips. Of the species obtained in British Columbia, a representative set was naturally claimed for the Canadian National Collection. In this and in all matters pertaining to the Hopping material the generous treatment received from the Canadian officials was greatly appreciated by us.
